

the 1990s, the number of people in the world who are under 15 years of age is expected to increase from 1.2 billion to 1.5 billion.

As the world's population grows, the demand for food and other resources will increase. This will put pressure on the environment and on the world's food supply.

One way to meet this demand is to increase the amount of land used for agriculture. This would mean clearing more forests and other natural habitats.

Another way to meet this demand is to increase the amount of food produced on the same amount of land. This would mean using more fertilizers and pesticides.

Both of these ways have drawbacks. Clearing more land for agriculture would destroy many species of plants and animals. Using more fertilizers and pesticides would pollute the soil and water.

One solution is to use sustainable agriculture. This means using methods that do not harm the environment and that can be used over and over again.

Sustainable agriculture can help to meet the world's growing demand for food and other resources without harming the environment.

There are many ways to practice sustainable agriculture. Some of the most common are organic farming, permaculture, and agroforestry.

Organic farming is a type of agriculture that does not use synthetic fertilizers or pesticides. Instead, it uses natural materials like compost and manure.

Permaculture is a type of agriculture that is designed to be sustainable. It uses a variety of techniques, including crop rotation and intercropping.

Agroforestry is a type of agriculture that combines trees and crops. This can help to improve the soil and provide shade for the crops.

Sustainable agriculture is a good way to meet the world's growing demand for food and other resources without harming the environment.

There are many benefits to sustainable agriculture. It can help to improve the soil, conserve water, and protect the environment.

Sustainable agriculture can also help to improve the lives of farmers and their families. It can provide them with a steady income and a healthy environment.
