

the 1990s, the number of people in the world who are under 15 years of age is expected to increase from 1.2 billion to 1.5 billion.

As the world's population grows, the demand for food and other resources will increase. This will put pressure on the environment and on the world's food supply. It is important that we find ways to meet this demand without harming the environment.

One way to do this is to use sustainable agriculture. This means using farming methods that do not harm the environment and that can be continued for a long time.

Another way is to use renewable resources. These are resources that can be replaced naturally, such as wind and solar energy.

Finally, we can use recycling. This means using materials over and over again, so that we do not have to use new materials all the time.

By using these methods, we can meet the world's growing demand for food and other resources without harming the environment.

It is our responsibility to make sure that we have enough food and other resources for everyone in the world. We must use these resources wisely and sustainably.

Only then can we ensure a better future for all.

Let us work together to make this a reality.

For a better world, we must act now.

Let us make the world a better place for everyone.

Let us make the world a better place for ourselves.

Let us make the world a better place for all.

Let us make the world a better place for the future.

Let us make the world a better place for the world.

Let us make the world a better place for the world.

Let us make the world a better place for the world.

Let us make the world a better place for the world.
